AI-POWERED EDUCATION
THE FUTURE IS NOW

It's not hard to find people who continue to challenge the power of artificial intelligence (AI), even though they're well aware that the technology has seeped into pretty much every field known to man. But we know, these people are fighting a losing battle.

Education is transforming. Classrooms have transformed. No longer are they just about a teacher in front of a blackboard. Classrooms are now technologically advanced spaces that have remarkably changed the way teachers teach and students learn. Believe it or not, AI is responsible for this.

"AI can adjust lessons to fit each student's needs, making learning more engaging and effective. It also helps teachers by giving them insights into student progress, helping them provide better support and improve their teaching methods," according to Monica Malhotra Kandhari, Managing Director of AASOKA, an EdTech platform that provides blended teaching-learning solution to schools.

Using data and smart algorithms, AI can help teachers track a student's progress, understand where exactly they are faltering and predict their future performance, enabling teachers to customize lessons per each child's specific needs.

According to a study by the Stanford Graduate School of Education, students who used AI tools for learning improved their performance by 26% compared to students who followed traditional learning methods.

The worldwide market for AI in education is touted to reach a whopping US$ 6 billion by the end of 2025, rising at an average rate of 47% annually since 2020, per a report by HolonIQ, one of the world's leading impact intelligence platform.

So, will AI replace traditional textbooks? It's a common question, that has a simple answer: Absolutely not. AI and textbooks will co-exist. The textbooks, however, will be digitized, and AI will keep these digital textbooks up to date with the latest research and fresh content, which will ensure students always have access to the latest and most current information.

Moreover, unlike before, when teachers could not figure out learning disabilities such as dyslexia, AI is able to do that early on and suggest customized interventions, making these classrooms of the future more inclusive.

Beyond academics, AI can spot signs of stress, allowing teachers to offer timely help. AI also help students develop critical thinking and problem-solving skills that are considered extremely important in today's work environment.

It's time, as parents, we welcome this new-age technological marvel with open arms instead of resisting it. Because, simply put, AI has already set its massive foot inside the educational arena and it is not going anywhere till it revolutionizes and reshapes the landscape of education.

Here's to technology, for a better future.

INDIA'S IMPACT PROFESSOR:

RAJESH K PILLANIA

ON

CREATING IMPACT ON THE LIVES OF PEOPLE **THROUGH HAPPINESS**

Dr Rajesh K Pillania, Professor at the Management Development Institute (MDI), Gurugram, shares his insights on happiness. Known as India's Happiness Guru, Prof. Pillania tells Education Post's **Tanay Kumar** that people should take happiness seriously for better health, relationships and success.

Q Childhood and adolescence play a critical role in creating a thought process for someone. How happy are you with your childhood and adolescence?

Looking back, I feel very fortunate that my parents have a positive attitude towards life and are happy people. I remember I used to play a lot when we visited our ancestral home in our village. It used to be a two-month summer vacation. Even in school, I used to play many sports and enjoy with friends.

Even after completing school, I feel lucky that my parents, siblings, and friends were very supportive. I made good friends in school and college, and they are still my friends. In college, while staying in a

hostel, I had a good life with friends. I am so grateful to my parents, siblings and friends for those happy times and memories.

Q You said in an interview that writing gratitude in the diary before bed is fruitful. But, it is a habit. Can you suggest how to create such a worthy habit? Our generation struggles to make some worthy habits.

Yes, writing gratitude is a really powerful hack to attain happiness, and developing a habit takes effort. First, we'll have to see how our brain works and how much effort it has to put in order to develop a new habit. Our brain is two per cent of our body weight, but it consumes twenty-five per cent of our body's energy.

Our brain follows a very simple rule: conservation of energy. We try to postpone anything that requires much more energy. So, first, we need to make habits simple and try things that consume less energy. Keep it simple. If you cannot write three or five gratitude things, you can write one to start with. Even if you say it to yourself if you don't like to write or just go through a day and see what good things happen to you, it's also a good beginning.

Second, if you ask anyone to change a hundred per cent in one day, the majority will surely not do so, but if you ask anyone to change just four per cent, the majority will. Our mind says, "Keep it simple." Our habit formulation says, "Start small." So, the one who writes the gratitude makes it easy and starts with a small change. You can do it on an alternate day if you can't do it daily, but it's very important to keep doing it regularly.

> **Happiness and strategy should be used together as happiness strategy to create happier, healthier and more successful individuals and organisations. Using happiness, we can make the strategy more successful. Research shows that when we are happy, we are more productive, more innovative. Thus, by being productive, we can reduce our costs, and by being innovative, we can differentiate.**

Q Your work is endorsed by leading global experts on happiness; leading global experts on happiness contribute to your books, and international and national media cover your work widely. Your work has been shared with millions of people in India and abroad. Did you expect such success when you started the work on happiness?

No, I didn't. Around fifteen years ago, I started my work on happiness. I was a science student. And from that, I learned to experiment. I started with small experiments and kept learning and improving. And all these things that you are saying that global experts are contributing and that the media is covering came later. But for many years, it was all hard work. As the work kept growing and I kept learning, it also gave me a lot of personal happiness. It gave me a lot of motivation.

My basic background and education are in the sciences. I came to management in the master's program. My PhD is in strategic management. I have worked in strategy and innovation for the last twenty-five years. Happiness work started around fifteen years ago. I don't have a background in psychology, so it wasn't easy to begin with.

I moved towards happiness research for two reasons. One is personal. I had some problems in life, and I was looking for a solution. And I saw that happiness is a common problem. Second, my primary area of work is strategy. In strategy, we see that out of ten strategies, nine strategies fail. I was also looking for ways to improve or make strategy more successful.

These two things—my personal problems in life and the problems in strategy—motivated me towards happiness. I started with humour and wrote columns and a book on Strategic Humour. Then, I researched relationships and wrote a funny book on Love Strategy. The work kept growing with time. For the last couple of years, I have also taught a popular course, Happiness Strategy, to MBA students at the Management Development Institute, Gurgaon.

Q The recent death due to chronic stress of a young CA who was an Ernst and Young employee has alarmed people about the toxic work culture. What are your stands on this incident?

If someone asked me who is responsible for my happiness, my answer would be I am the one who is responsible for my happiness. If you go into research on happiness, it shows that there are three primary sources of happiness.

First is genetics, the second is the environment, and the third is the individual's choice to be happy. Of these three, the individual's choice to be happy is the most important and really matters. Happiness needs to be

chosen on a daily basis until it becomes a habit.

The environment, including organisations, has a role to play, but individuals have the ultimate responsibility. Organisations should invest in creating environments that support happiness because it will help the organisations. With happiness, organisations can have a healthier workforce, a workforce with good relations and a productive & innovative workforce.

It's not that organisations are not trying—at least in the private sector, there's some effort. But I'm taking a different stand. Let's not leave our happiness in the hands of someone else. Let's take personal responsibility for it.

Q What are the reasons behind India's low rank in the World Happiness Index?

Happiness research is around forty years old, a quite young domain. It's evolving. It's a work in progress. So, earlier, we couldn't measure happiness, but today, we can. Money as a concept is centuries old, but still, we make mistakes in dealing with it. Happiness research is an evolving concept, and with time, it will get better.

The World Happiness Report is a work in progress, and it has shortcomings. I don't agree with India's low ranking because, in India, there are strong relationships and strong beliefs in God.

The longest study on happiness was at Harvard University, and it showed the importance of relationships in happiness. In India, relationships are still quite strong. A strong belief in God helps many people find peace and happiness. Life doesn't always go well. There are troubles, too. But if one believes in God, one gets some kind of mental peace that God will take care of her.

Q Being an expert in both happiness and strategy, how can these different fields be harnessed together to create successful individuals and organisations?

Happiness and strategy are very similar. For example, we know a lot about happiness, but unhappiness is all around us even then. So, there's a tremendous failure rate in happiness. Similarly, there's a huge failure rate in strategy. Out of ten strategies, nine fail. This is one common theme between these two. Second, in both happiness and strategy, there is a lot of confusion about the concepts.

Happiness and strategy should be used together as happiness strategy to create happier, healthier and more successful individuals and organisations. Using happiness, we can make the strategy more successful. Strategy is basically of two kinds, either cost leadership or differentiation. Either you reduce your cost or bring something new, something different. Happiness helps in both these cases as research shows that when we are happy, we are more productive, more innovative. Thus, by being productive, we can reduce our costs, and by being innovative, we can differentiate.

And happiness is so important we cannot leave it to chance. We need to have some strategy in place. Using concepts from strategy we can better implement happiness.

Q As a management professor, what strategies can organisations implement to promote happiness within their workforce?

To keep it simple, let's say there are three basic steps.

First, organisations need to build a business case for happiness. They need to ask themselves: Why do we need happiness? As discussed above, organisations need happiness because it can help with organizational strategy. There are other benefits, too.

Second, one of my primary focuses, both in strategy and happiness, is to keep happiness and strategy simple. As we discussed in the earlier part of the interview, the mind likes simple things more as compared to complicated things. So, organisations need to define happiness simply.

Third is creating multiple ways to reach happiness for individuals in the organisation as each individual is different and happiness is a personal thing.

Q What parameters and frameworks are most effective in evaluating happiness within individuals or organisations?

There is one very important tool, which is very simple and very effective. It is called the Cantril ladder. It is a scale from 0 to 10. 0 is the worst possible life, and 10 is the best possible life. Individuals are asked to measure themselves on this scale because happiness is a personal thing. They are the best judges of their happiness, and they rate themselves.

The World Happiness Report also uses this. Using this simple tool, we can measure an individual's or organisation's happiness now, measure it again tomorrow, and see the difference.

In my training, in my teachings, before my class starts and before my training program starts, we measure happiness like this. After the end of the program or the class, we again measure it. And generally, there is a positive change.

Q Manish Sisodia, former Delhi's Education Minister, introduced the Happiness Class in the schools. How do you see this policy? And could the happiness of children be measured?

We can measure happiness using the Cantril ladder and apply it in the case of children.

Life skills are an essential thing our schools and education system don't teach. I think it's good that Manish Sisodia and his ministry and government have started this initiative.

I'm unsure how successful or effective they are in doing this, but I appreciate it as a policy. I think more governments would adopt this kind of policy. The problem with policy generally is that policy on paper is very good, but its implementation must also be good.

Q I was looking at your very impressive work profile on the MDI website. You are ranked jointly number one in terms of average research productivity among management faculty in India, number three globally in research publications in India, and recently, number two globally in research publications on sustainability. You are pretty successful as an academician, convincingly among the best in this country, but you work hard even then. What keeps you motivated to work?

I am an academician by choice, as I could have joined any other field. I love working, particularly in research, writing, and teaching, and it has become a habit. I am fortunate to have what I have, and I want to use my capacity and whatever skills I have developed to do some good work and contribute to happiness, strategy, innovation, and sustainability fields. Happiness and strategy are essential life skills that can help individuals, organisations, and society.

There is so much research and knowledge on these, but unfortunately, most of it stays in thick books and boring research papers. Ordinary people don't know about these things. For example, when I tell people that I can teach you about happiness, people are surprised at how one can learn about happiness. Besides working on the frontiers of research, my focus is also on democratising happiness, strategy, and innovation research.

This desire to help, give back, and contribute keeps me motivated.

Q You are not a typical business school professor. Your work has already reached millions of people in India and abroad. You travel around India to research happiness and share happiness ideas for free, spending your money. This is very impressive! These days, when you could have used your time to earn money with your work, you are sharing happiness ideas for free with

people in different parts of India, spending your own money! You are India's real Impact Professor among management faculty, impacting many people with your work. Tell us more about this.

Yes, I'm travelling to all 36 states and regions of India to better understand my country and its happiness. While travelling and researching, I also share what I know pro bono with individuals, schools, universities, or any government department which asks me. It's a two-way process: I learn from them and share what I know with them.

I'm doing it because I strongly believe in the importance of happiness in our lives. I'm very fortunate that I came across this stream of research on happiness and learned about it. It has impacted me a lot personally and made me much happier.

So, this desire to spread happiness to more people and to learn more about happiness is forcing me to spend my own money on research and try to impact as many people as possible.

Q Do you have any quick tips for our readers to be happier in their lives?

The first one is to make a personal case of happiness. The second one is to make a personal definition of happiness. The third one is to keep it simple when trying to be happy.

The fourth one is to start small but keep doing it repeatedly. Lastly, if nothing else, laugh more.

We know that when we are happy, we smile. But interestingly, if we start smiling, we also feel better. Interestingly, for our body and brain, there's not much difference between fake and real laughter as both have similar benefits. EP

CAREERERA IS MORE THAN A PLATFORM

WE ARE BUILDING AN EDUCATIONAL ECOSYSTEM FOR GLOBAL LEARNERS

Vivek K Singh
CEO & Founder of Careerera

Vivek Kumar Singh, CEO & Founder of Careerera, an Ed-Tech platform shared his vision for revolutionizing online education, expanding the platform to over 60 countries in an interview with Education Post's **Prabhav Anand**. He emphasized the platform's commitment to real-world, hands-on learning, offering students opportunities for career transformation. He discussed the importance of partnerships with prestigious institutions, such as Birchwood University, to maintain academic excellence.

Q Careerera has grown to serve students across 60 countries. What was the initial vision behind starting Careerera, and how has that vision evolved over the years?

Careerera began as a small online platform offering professional training programs with a focus on short-term certifications. Over the past 9 years, it has steadily expanded its scope and influence, evolving into a comprehensive higher education platform. Today, Careerera offers a wide range of programs, from certification courses to advanced Doctoral degrees. With a global footprint, it now serves students and professionals in over 60 countries, providing world-class education tailored to the needs of various industries and career paths. This journey of growth reflects a commitment to excellence and the ability to adapt to the evolving educational landscape. We have been following our vision since the inception and have become successful in achieving it.

Q You have a diverse academic background, including a master's in Economics and an MBA. How did these qualifications shape your approach to leading an edtech platform?

Completing an MBA played a pivotal role in shaping the development of my EdTech business. It equipped me with essential skills in strategic planning, financial management, and leadership, which have been critical in scaling operations and navigating the challenges of a dynamic education market. The program also enhanced my understanding of market trends, customer behavior, and innovation, enabling me to create a sustainable business model that aligns with the evolving needs of learners globally. But my everyday office experiences have taught me more.

Q With competition increasing in the EdTech space, how do you differentiate your platform in terms of content, user experience, and student outcomes?

While most EdTech platforms function solely as distributors of courses, Careerera has evolved into a comprehensive educational ecosystem. It not only provides a platform for course distribution but also owns and operates multiple universities in the USA and Europe. This unique structure allows Careerera to offer a more integrated and robust learning experience, bridging the gap between online education and traditional academic institutions. This ownership of universities sets Careerera apart as a true leader in the education space, providing greater credibility and a wider array of learning opportunities to its students.

Q Online learning platforms often struggle with student engagement and retention. What strategies has Careerera implemented to keep students motivated and engaged throughout their learning journey?

At Careerera, we prioritize delivering practical, hands-on training programs that emphasize real-world application. We also focus on credit-based programs to keep students engaged and motivated throughout their learning journey. These courses are designed to provide immediate value, helping students perform better in their current roles while preparing them for future opportunities, ensuring they remain relevant in a rapidly evolving industry. Our trainers are active professionals, who are highly skilled in fostering engagement and interaction, ensuring that students stay committed and complete their courses successfully.

Q Careerera offers a range of certification programs. How do these certifications translate into tangible career benefits for students? Can you share some success stories?

Our courses play a significant role in career advancement, with 30 to 50% of learners successfully transitioning into new fields, while others leverage our programs for growth within their existing industries. For instance, professionals from sales often join our Data Analytics courses and secure roles in Data Science teams at major companies. Similarly, those from marketing enhance their skills with our Digital Marketing programs, becoming Performance Marketing experts. IT professionals frequently enroll in our Cyber Security courses, enabling them to transition into specialized cybersecurity roles. Our training equips learners with the skills needed for transformative career shifts and professional growth.

Q With the rapid growth of online education, there are concerns about the standardization of content. How do you maintain consistent academic rigor across courses and instructors on your platform?

Within our group, several prestigious universities and institutions collaborate to deliver top-tier programs

to Careerera students. Each partner institution excels in its respective field. For example, Birchwood University is renowned for its Data Science and Cyber Security courses, while EIMT is highly regarded for its MBA and DBA programs. These institutions, along with our dedicated delivery departments, ensure that the content and delivery of all courses meet the highest standards of quality and consistency through our platform. This partnership approach guarantees a seamless and exceptional learning experience for our students across various disciplines.

Q EdTech has the potential to democratize education, but access to technology remains a barrier for many. What is your platform doing to address the digital divide and make learning more accessible to underserved populations?

We are developing a wide range of MOOCs (Massive Open Online Courses) across various disciplines to make high-quality education accessible to a broader audience. These programs are designed to cater to diverse learning needs and are available through our platform in both online and offline modes. By offering this flexibility, we ensure that learners from different backgrounds and regions can access our courses, regardless of their internet connectivity or location. Our MOOCs are structured to provide comprehensive, self-paced learning experiences, enabling students to upskill, reskill, or pursue new interests with ease. Through this initiative, we aim to democratize education, reaching the masses and empowering individuals to achieve their academic and professional goals.

Q Data privacy is a growing concern for users of online platforms. How does your company ensure the protection of student data, especially with increasing reliance on technology and AI in education?

Data privacy and security are top priorities for us, which is why we utilize localized cloud servers with AWS, ensuring multi-layered protection for all our data. By leveraging AWS's robust security infrastructure, we safeguard sensitive information through advanced encryption, firewalls, and continuous monitoring. This localized approach not only enhances data security but also ensures compliance with regional data protection regulations, providing our users with a secure and trustworthy platform for their learning experience.

Q As the landscape of education shifts toward digital learning, how does your platform stay ahead of emerging technologies like AI, virtual reality, and gamification to enhance student learning experiences?

We recognize that AI gamification and virtual reality (VR) will significantly shape the future of self-learning, and for the past year, we have been actively exploring how these cutting-edge technologies can be integrated into our platform. While our primary focus remains on live, instructor-led training, we are investigating how AI and VR can enhance the engagement and effectiveness of these sessions. AI-powered gamification has the potential to create interactive and personalized learning paths, while VR can offer immersive, hands-on experiences that simulate real-world environments. Our goal is to leverage these technologies to enrich live training, making it more dynamic, engaging, and impactful for our students.

Q Where do you see the future of edtech heading in the next 5-10 years, and what role do you envision Careerera playing in that future?

In the next decade, Careerera envisions establishing itself as a local platform serving over 100 countries, addressing a wide range of higher education needs. From foundational skilling and upskilling courses to advanced certification and Doctoral programs, our platform will cater to diverse learners, ensuring they are equipped for both current and future job markets. By partnering with universities and institutions across more than 25 countries, we aim to provide a globally recognized, yet locally relevant, education experience. This strategic growth will allow us to deliver high-quality education tailored to regional needs, while maintaining the global standards that our learners expect. Our mission is to become a trusted educational ecosystem, helping students and professionals around the world achieve their career goals and academic aspirations. EP

BREAKING STIGMA AROUND MENSTRUATION STARTS WITH EDUCATION

OPEN CONVERSATIONS

Vikas Bagaria
Founder, Pee Safe

In India, the topics of hygiene and menstrual health continue to be surrounded by stigma and silence, particularly in rural and underserved communities. Despite increased awareness in urban areas, millions of women still face challenges in accessing basic hygiene products and accurate information. Cultural taboos, traditional beliefs, and limited resources create significant barriers to addressing issues like menstrual hygiene and personal cleanliness.

One of the most pressing concerns is the high prevalence of infections caused by inadequate menstrual hygiene. Nearly 60% of women in India suffer from infections due to improper practices and a lack of access to hygienic products. These issues are further exacerbated by the lack of education and open discussions about menstruation. Breaking the silence and normalizing conversations around these topics is crucial to improving the quality of life for women and ensuring their health is not compromised by preventable issues.

Efforts are being made to address these problems through awareness campaigns, community workshops, and initiatives that provide resources to underprivileged women. These initiatives aim not only to distribute sanitary products but also to educate women about the importance of hygiene during menstruation, helping to reduce infections and debunk myths.

Public and private sector collaboration has also been key to spreading awareness and encouraging the use of safe, eco-friendly hygiene products. By focusing on education and sustainability, hygiene-focused organizations are working to shift the narrative around menstrual health, reduce the stigma, and ensure that all women—regardless of location or socioeconomic status—have access to the hygiene resources they deserve.

*In this meaningful conversation with **Vikas Bagaria,** the visionary founder of Pee Safe, he told Education Post's **Prabhav Anand** about getting down into the pressing issues of hygiene and menstrual problems, and the societal stigmas surrounding them. Pee Safe, now a household name in the hygiene and wellness industry, was born out of a deeply personal experience when Bagaria's wife, Srijana, developed a UTI during a road trip due to unhygienic public restrooms. This incident led to the creation of the brand's flagship product, the Toilet Seat Sanitizer, which has since revolutionized personal hygiene in India.*

Q Pee Safe has become a well-known brand in the hygiene and wellness sector. What inspired you to start this venture, and what were some of the initial challenges you faced while introducing the idea to the market?

The inspiration for Pee Safe came from a personal experience faced by our co-founder, Srijana Bagaria, when she developed a UTI while on a road trip due to the lack of hygiene in public restrooms. This prompted her, along with me to develop the Toilet Seat Sanitizer. Determined to resolve the issue of inaccessibility of hygienic and safe toilets, Pee Safe was officially launched under Redcliffe Hygiene Private Limited in 2017.

Initial challenges included consumer skepticism about new hygiene products, particularly those that were not well-known in the market, as well as educating the public about the importance of personal hygiene. Additionally, since the problem we are solving requires the prerequisite knowledge of knowing about urinary tract infections, the dangers of germs on toilet seats etc, we had to focus on not just selling but also advocating and educating. We were category creators and while that provides an advantage, it is also something that requires extensive work.

Q What are the biggest challenges that hygiene companies face when trying to raise awareness about the importance of personal hygiene in underserved or rural communities?

The biggest challenges include limited

access to information and resources, cultural stigmas surrounding personal hygiene topics, and inadequate distribution channels. Additionally, overcoming traditional beliefs and ensuring the availability of products in these communities are significant hurdles.

Q Given the challenges in menstrual hygiene awareness and access in government schools, how is Pee Safe collaborating with these institutions to improve education and provide resources for the female students, and what outcomes have you observed from these initiatives?

Pee Safe collaborates with institutions through educational programs and workshops through our partner NGOs that focus on menstrual hygiene and health education as education and resource partners. We provide resources like menstrual products and informational materials. Outcomes include increased awareness among female students, reduced stigma, and improved attendance during menstruation. Our initiative, HaqSePeriod has impacted 2,00,000+ underprivileged women through 400+ sessions in 90+ cities.

Q You've highlighted the use of micro-influencers and Anita Hassanandani to expand Pee Safe's reach. How do you measure the impact of these influencers on your brand's visibility, especially in Tier II and Tier III markets? Also, how do you plan to balance spending on marketing once Pee Safe becomes a household name?

We measure the impact through engagement metrics, conversion rates, and brand recall surveys. In Tier II and III markets, we analyze sales data and social media reach to assess effectiveness.

Once Pee Safe becomes a household name, we plan to optimize our marketing budget by reallocating resources to high-performing channels and maintaining strong community engagement to sustain brand loyalty.

Q You recently launched campaigns #OwnTheRed and #DoItTheNaturalWay to challenge menstrual health taboos and promote a more natural depiction of periods. How have these campaigns influenced public conversations around menstrual hygiene, and what impact do you expect them to have on reducing stigma and encouraging sustainable practices in menstrual hygiene?

These campaigns have sparked crucial conversations about menstrual health and normalized discussions around periods.

Reduced Stigma:
A greater acceptance of menstruation as a natural part of life, making conversations about menstrual health more mainstream.

Informed Choices:
Increased awareness about menstrual products, leading to a shift in consumer behavior.

Empowered Communities:
A stronger sense of community among women, who are more likely to support and advocate for each other's health and hygiene needs.

Q With approximately 60% of women in India suffering from infections due to inadequate menstrual hygiene, how does Pee Safe plan to further educate and raise awareness about proper menstrual hygiene to address this issue?

Pee Safe plans to conduct workshops, collaborate with NGOs, and leverage social media to disseminate information on proper menstrual hygiene practices. We aim to engage influencers and community leaders to spread awareness and provide access to quality products. We have catered to 1 crore+ women through our products, and have a strong online community where these topics are discussed openly and non-judgmentally.

We have empowered 2,00,000+ underprivileged women by distributing over 19,00,000 pads and cups with HaqSePERIOD initiative.

Q Despite holding a dominant market share in toilet seat sanitizer sprays, Pee Safe faces tough competition in the feminine hygiene product category from established players like P&G and J&J. What strategies are you implementing to capture a larger share of the feminine hygiene market?

To capture a larger market share, we are enhancing product innovation, expanding our distribution channels, and launching targeted marketing campaigns that resonate with consumers' needs. Additionally, we're focusing on education and awareness to create informed consumers who value hygiene.

Q With increased awareness of hygiene due to the COVID-19 pandemic, what shifts have you observed in consumer behavior, and how has your organization adapted its product offerings to meet changing demands?

There has been a minor difference in the hygiene quotient pre- and post-COVID19. While people in urban India understand the importance of hygiene for overall well-being, the majority still require encouragement and awareness to develop a hygiene-conscious lifestyle. There is still some work that needs to be done to make hygiene an important part of everyone's lifestyle. A mindset shift is essential if hygiene practices are to become habitual. Hygiene needs to be promoted in workplaces, public places, and homes. Regular campaigns and awareness programs should be conducted to educate people about the importance of hygiene.

Q With growing concerns about sustainability, how is the hygiene and wellness industry incorporating eco-friendly practices in product development and packaging, and what plans are in place to minimize environmental impact?

The industry is increasingly focusing on recyclable packaging, and sustainable sourcing. Pee Safe is using recycled paper for packaging, no single use of plastics, we recycle more plastic than we use, and we use electric vehicles in our logistics.

Q Looking ahead, what are the biggest challenges you foresee for Pee Safe and the hygiene industry, and how are you preparing to address those challenges while continuing to grow the brand?

Challenges include increasing competition, evolving consumer expectations, and regulatory changes. Pee Safe is preparing by investing in R&D for innovative products, enhancing customer engagement, and adapting our marketing strategies. We are committed to educating consumers, which will help us maintain a competitive edge in the market. EP

TRANSFORMING MENTAL HEALTHCARE IN INDIA MEANS INTEGRATING IT INTO PRIMARY CARE

Dr. Archana Narendra Javadekar
Professor of Psychiatry
Dr. DY Patil Medical College, Hospital, and Research Center
Pimpri, Pune

India's mental health crisis is at a critical juncture. With the World Health Organization (WHO) listing depression as the leading cause of disability worldwide, and India accounting for a significant portion of global mental health issues, the urgency to address this challenge has never been greater.

Yet, despite this alarming situation, India's mental health infrastructure remains underfunded and stretched thin. According to the Ministry of Health and Family Welfare, the country has less than one psychiatrist for every 100,000 people, a glaring shortfall in a nation where mental health conditions are rising rapidly.

While the Mental Healthcare Act of 2017 marked a significant step forward in recognizing the rights of those struggling with mental illnesses, implementation gaps still persist. The urban-rural divide is stark—urban centers have better access to mental health services, leaving rural and marginalized communities underserved.

In these areas, stigma, misconceptions, and cultural barriers further discourage people from seeking the care they need. Public awareness campaigns have begun to make a difference, especially in cities, but their reach in rural regions remains limited, underscoring the need for more localized, culturally sensitive interventions.

On a more promising note, the pandemic spurred a rise in telepsychiatry, offering new hope for bridging access gaps. Virtual consultations have made mental health support more accessible for millions, particularly in remote areas, although challenges like connectivity issues and concerns over the quality of virtual care still need to be addressed.

To have deeper insights into these pressing issues, Education Post's ***Prabhav Anand*** *spoke with* ***Dr. Archana Narendra Javadekar****, a leading Professor of Psychiatry at Dr. DY Patil Medical College, Hospital, and Research Center in Pune's Pimpri.*

Q In recent years, we've seen a sharp rise in mental health issues globally, with the WHO reporting that depression is now the leading cause of disability worldwide. Despite this, mental health services in India remain largely underfunded and understaffed. How do you assess the current state of mental healthcare infrastructure in India, especially in terms of accessibility and quality of care?

The mental healthcare infrastructure in India is indeed facing significant challenges. Despite growing awareness around mental health, accessibility remains limited, particularly in rural and underserved areas. Many people struggle to get help due to stigma, long distances and financial constraints. Additionally, our healthcare system lacks sufficient professionals and facilities to cater to the growing demand. However, the introduction of initiatives like the Mental Healthcare Act, 2017, has been a positive step towards ensuring more rights for individuals suffering from mental illness. But we still have a long way to go in terms of implementing policies effectively, providing accessible care and improving the quality of mental health services. The focus should be on integrating mental health into primary healthcare and training more frontline workers in mental health basics to bridge this gap.

Q One of the ongoing criticisms of psychiatry is the over-reliance on pharmaceutical interventions, sometimes at the expense of holistic treatment approaches. Given your extensive experience, how do you balance medication with therapy and other alternative treatments, and do you believe the field of psychiatry is evolving sufficiently to include more integrative approaches?

One of the key aspects of modern psychiatry is understanding that mental health is deeply intertwined with both biological and psychosocial factors. While medications play a crucial role in managing severe conditions like schizophrenia or bipolar disorder, we also recognize that they are not the only solution. As a psychiatrist, I believe it is essential to combine medication with therapy and other integrative approaches like lifestyle changes, mindfulness practices and family support systems. There's growing recognition in the field that holistic care, which takes into account a patient's environment, relationships and daily habits, can lead to better long-term outcomes. Thankfully, psychiatry is evolving and we are seeing a shift towards more integrative approaches, although more awareness and training in these areas are still needed.

Q India has a staggering shortage of mental health professionals, with less than one psychiatrist per 100,000 people, according to the Ministry of Health and Family Welfare. What steps should be taken

at a policy level to address this gap, and do you believe enough is being done to attract young doctors into the field of psychiatry.

The shortage of mental health professionals is a critical issue and it's something that needs urgent attention at the policy level. First, we need to invest more in mental health education and awareness right from the mid school level to encourage more students to consider psychiatry as a viable career. Offering scholarships and incentives, especially for those willing to work in rural areas, could help address the geographical disparities in care. We also need to promote task-sharing models where trained non-specialists can provide basic mental health care, freeing up psychiatrists to focus on more complex cases. While there have been efforts to improve access to mental health services, such as the District Mental Health Program, we need much more robust, long-term investments in training and infrastructure to make a lasting impact.

Q Despite significant advancements in mental health awareness, stigmatization remains a major barrier, particularly in rural areas where mental health is often misunderstood. In your view, how effective have public awareness campaigns been in changing attitudes, and what more can be done to reduce the stigma surrounding mental illness, especially in underserved communities?

Public awareness campaigns have undoubtedly played a crucial role in reshaping attitudes toward mental health, raising awareness about conditions, symptoms and treatment options. These efforts, especially through digital media, have helped normalize conversations around mental health, making it more accessible and less taboo for many. However, despite these strides, stigma remains pervasive, particularly in rural and underserved areas, where mental health issues are often clouded by cultural misconceptions or a lack of understanding.

To address this gap, it is essential to localize awareness efforts. Community-based campaigns, involving trusted local figures like teachers, community leaders and healthcare workers, can serve as more credible sources of information. Educational sessions held in local languages and aligned with community values can help demystify mental health issues in a way that feels authentic. Integrating mental health education within primary healthcare services in these areas could bridge the information gap, allowing individuals to seek help without fear of judgment.

Q Telepsychiatry has gained momentum during the pandemic, with many experts hailing it as a breakthrough in expanding access to mental healthcare. However, concerns about the quality of virtual care, especially for serious conditions, have also been raised. What are your thoughts on the potential and limitations of telepsychiatry, and do you see it becoming a permanent feature in the Indian mental healthcare landscape?

Telepsychiatry has indeed opened doors to mental healthcare for millions in India, addressing critical barriers such as geographical distance, availability of professionals and social stigma. By providing a way for patients to consult psychiatrists and counselors remotely, it has made mental health support more accessible. However, telepsychiatry comes with limitations. The lack of in-person cues, such as body language and facial expressions, can make it challenging for professionals to fully assess and respond to their patients, particularly in cases of severe mental illness. Also, the absence of hands-on physical support can make it difficult to build the same level of therapeutic trust. Furthermore, connectivity issues in rural areas can disrupt consultations and data privacy remains a concern for many patients who may hesitate to use virtual platforms. Despite these challenges, I believe telepsychiatry will continue to play a vital role in India's mental healthcare landscape. With ongoing advancements in digital technology and data protection, many of the current limitations could be alleviated.

Q Critics have pointed out that mental health care in India often focuses more on urban and affluent populations, leaving rural and marginalized communities behind. What are the unique mental health challenges faced by these underserved populations, and what strategies do you think are necessary to bridge this urban-rural divide in mental healthcare delivery?

Mental health care in India shows a strong urban bias, leaving rural and marginalized communities underserved. These populations face unique mental health challenges influenced by socioeconomic and cultural factors. Poverty, lack of education and social stigma around mental illness often exacerbate mental health issues in rural areas. Additionally, mental health conditions are frequently misunderstood or associated with superstitions, leading to further alienation and reluctance to seek help. The scarcity of trained mental health professionals in rural regions makes access to quality care even more difficult, leaving many individuals without essential support.

Bridging this urban-rural divide in mental healthcare delivery requires a culturally sensitive and multi-layered approach. First, we must empower community health workers and primary healthcare providers with basic training in mental health care. This would help in recognizing symptoms, providing initial counseling and referring patients to specialized care when needed. Given that community health workers are familiar faces within these areas, they can help reduce the stigma surrounding mental illness and foster a supportive environment for seeking help.

Localized mental health campaigns are also crucial for raising awareness and dispelling myths around mental health. Involving local leaders, educators and religious figures to discuss mental health openly can help normalize these conversations within rural communities. Collaborating with NGOs and local organizations can further amplify these messages, ensuring they resonate with the unique social and cultural contexts of underserved communities. Integrating mental health care within the primary healthcare infrastructure will make it more accessible and reduce the need for specialized centers, which are often lacking in rural areas. With these strategies, mental health care in India can move toward a more inclusive model that bridges the gap between urban and rural populations, bringing support to those who need it most. EP

MODERN HR IS A **'STRATEGIC PARTNER'**, ALIGNING TALENT WITH **BUSINESS GOALS**

Vikas Dua
HR Head, Weber Shandwick

__Vikas Dua,__ HR Head at Weber Shandwick, talks about the evolving world of talent acquisition and human resources with Education Post's __Prabhav Anand.__ With over 18 years of experience spanning both startups and large multinational corporations, Dua shares his insights on the significant shifts in HR, driven by technology, the growing emphasis on employee-centric practices, and the integration of automation and AI. His unique perspective, honed by working in diverse environments, reveals the challenges of balancing agility with structure in recruitment, and the need for organizations to build authentic employer brands to attract and retain top talent.

Beyond the corporate lens, Vikas discusses his personal journey in building his own HR brand, "HR in my HeaRt," where he engages with the professional community through vlogs, writing, and podcasts. This interview highlights the importance of personal branding in the HR space and how it empowers professionals to make meaningful impacts in their fields. His passion for HR and his belief in its evolving role as a strategic partner in business success resonate throughout the conversation.

Weber Shandwick

Q With over 18 years of experience in talent acquisition, how have you seen the field evolve, particularly from your early days working with startups to now leading HR at large organizations?

Over the past 15-20 years, I have seen HR evolve from a primarily administrative function to a strategic partner in business success. Historically focused on tasks like payroll, compliance, and hiring, modern HR now plays a central role in shaping company culture, driving organizational change, and aligning talent strategies with business goals.

Key changes include the rise of technology, with HR adopting tools like AI, data analytics, and automation to streamline recruitment, employee engagement, and performance management. These advancements allow professionals like me in HR to focus on more strategic initiatives, such as workforce planning, diversity, equity, and inclusion (DEI), and enhancing the employee experience.

The shift toward employee-centric practices has also been significant. HR has moved from transactional to relational, focusing on employee well-being, learning and development, and fostering a positive organizational culture.

Q You've had the unique experience of working in both startup environments and large multinational corporations. What are the most significant challenges in talent acquisition across these two worlds, and how have your strategies differed when addressing these challenges?

In start-ups, the main talent acquisition challenge is attracting top talent with limited resources. These companies often lack the brand recognition and compensation packages of larger firms, making it harder to compete for highly skilled candidates. Additionally, start-ups require individuals who thrive in fast-paced, ambiguous environments, which can be difficult to assess during the hiring process.

In large organizations, the challenge is often the slow and bureaucratic hiring processes, which can cause delays and lead to losing candidates to more agile competitors. Additionally, large firms may struggle with innovating their recruitment strategies to appeal to younger generations, as well as balancing diversity, equity, and inclusion (DEI) initiatives with business needs.

Both types of organizations need to develop unique value propositions and leverage technology to streamline hiring.

Start-ups often adopt more agile and personalized recruitment strategies. They focus on leveraging their culture, mission, and opportunities for rapid growth to attract candidates who value innovation and impact over stability. Start-ups frequently rely on social media, networking, and employee referrals to reach niche talent pools. They also tend to offer flexible compensation models, including equity or performance-based incentives.

In contrast, large organizations emphasize structured recruitment processes, using established employer branding and extensive resources. They often rely on formal channels like job boards, talent pipelines, and partnerships with universities. To address slow processes, they increasingly adopt AI-driven tools to screen candidates, shorten time-to-hire, and ensure consistency. Large firms may also have specialized teams to focus on diversity recruiting, offering benefits that emphasize stability, career progression, and work-life balance to attract a broader pool of talent.

Both approaches are shaped by their respective organizational needs and resources.

Q With the increasing integration of automation, AI, and data analytics in HR, what skills do you believe HR professionals will need to stay relevant in the next decade? How should HR departments prepare for these changes, and what role does upskilling play in this preparation?

HR professionals will need a blend of technical and soft skills to stay relevant in the next decade. Key technical skills include data literacy, understanding of AI tools, and proficiency in HR analytics for making data-driven decisions. Familiarity with automation processes, as well as cybersecurity and digital ethics, will also be crucial.

Soft skills such as emotional intelligence, change management, and strategic thinking will be essential as HR professionals increasingly focus on enhancing the employee experience. HR teams should embrace continuous learning, fostering a culture of agility and adaptability.

To prepare, departments should invest in upskilling and reskilling initiatives, partnering with learning providers and offering tailored training programs. Upskilling will ensure HR remains capable of leveraging new technologies while retaining a people-centric approach. Collaboration with IT teams and data scientists will further strengthen HR's role in shaping workforce strategies.

Q While technology has certainly enhanced HR efficiency, there is often concern about losing the human touch in the hiring process. How do you balance leveraging technology with maintaining the personal and empathetic aspects of HR, particularly in talent acquisition?

Balancing technology and the human touch in HR requires a thoughtful, hybrid approach. While technology can streamline processes, it's important to ensure that candidates still feel valued throughout their journey. To maintain empathy in talent acquisition, we can use automation for administrative tasks like screening and scheduling, freeing up HR professionals to focus on high-value, personal interactions.

Personalized communication should be a priority—automated messages can be tailored, but key touchpoints, such as interviews, feedback, and negotiations, should always involve direct human interaction. Video interviews, for example, can still be engaging and personable if conducted thoughtfully.

Moreover, HR professionals should use data and AI tools to better understand candidate needs, allowing them to offer more personalized support. By balancing efficiency with empathy, we can use technology to enhance, not replace, the candidate experience.

Q You've delivered multiple TEDx and keynote speeches across universities and industry forums. Based on your interactions with students and professionals, what are the most common misconceptions about HR and talent acquisition?

One common misconception is that HR is solely responsible for administrative tasks, like payroll or compliance. In reality, modern HR is a strategic partner, playing a critical role in shaping organizational culture, driving employee engagement, and aligning talent with business goals.

In talent acquisition, many assume it's just about filling positions quickly. However, it's more about finding the right fit—considering both skills and cultural alignment—and building long-term relationships. People often underestimate the importance of a well-thought-out recruitment strategy that emphasizes diversity, equity, and inclusion (DEI).

Another misconception is that technology will replace HR roles. While tech enhances efficiency, it can't replicate the human judgment needed for nuanced decisions, like assessing cultural fit or managing sensitive employee matters.

HR professionals need to adapt by developing new models for sourcing, engaging, and managing freelance talent. This includes leveraging freelance platforms, building networks of contract workers, and creating policies that integrate gig workers into teams effectively. HR will also need to adjust compensation structures and benefits to accommodate flexible work arrangements, while ensuring compliance with evolving labor laws.

HR's role today is dynamic and strategic, focused on building a strong, thriving workforce.

Q Employer branding has become critical in attracting top talent in today's competitive market. In your experience, how can organizations build a strong employer brand that not only attracts talent but also retains it?

Building a strong employer brand starts with authenticity. Organizations need to clearly define and communicate their values, mission, and culture, ensuring that these are consistently reflected in their practices, both internally and externally.

To attract top talent, organizations should highlight their unique value proposition—whether it's opportunities for career growth, a strong commitment to diversity and inclusion, or a focus on work-life balance. Utilizing employee testimonials and showcasing success stories helps create an authentic brand image that resonates with potential hires.

For retention, employer branding must be backed by a positive employee experience. This involves offering continuous learning and development, recognizing and rewarding achievements, and fostering an inclusive and supportive work environment. Regularly engaging with employees through feedback mechanisms ensures alignment between the brand promise and employee satisfaction.

Consistency across touchpoints—social media, career sites, and employee interactions—reinforces credibility and trust, essential for both attraction and retention.

Q With the rise of the gig economy and freelance work, how do you see the role of traditional talent acquisition shifting? Are companies adjusting their hiring strategies to accommodate more flexible work arrangements, and how should HR professionals adapt to this trend?

The rise of the gig economy is reshaping traditional talent acquisition. Companies are increasingly adopting hybrid hiring strategies that blend permanent roles with project-based or freelance positions. This shift allows organizations to access specialized skills on-demand and respond more flexibly to changing business needs.

HR professionals need to adapt by developing new models for sourcing, engaging, and managing freelance talent. This includes leveraging freelance platforms, building networks of contract workers, and creating policies that integrate gig workers into teams effectively. HR will also need to adjust compensation structures and benefits to accommodate flexible work arrangements, while ensuring compliance with evolving labor laws.

To succeed in this trend, HR must emphasize agility in workforce planning, focus on creating inclusive cultures that embrace non-traditional workers, and reframe their recruitment strategies to attract diverse talent pools, including gig workers. This shift allows companies to maintain a competitive edge in an increasingly dynamic labor market.

Q Your 'HR in my HeaRt' brand and your work as a vlogger, writer & now, podcaster, have gained significant traction in the HR community. What motivated you to start sharing your insights in this way, and how do you see personal branding influencing the careers of HR professionals moving forward?

The creation of the 'HR in my HeaRt' brand is a natural evolution of my professional persona, keeping in tune with the digital and social world of these times. I have been fortunate to have my sharing resonate with so many people in the professional community. The ability to share learnings from my experiences that can have a positive impact on others, has been the biggest motivation for me. EP

IMMERSIVE TECHNOLOGIES WILL DRIVE THE NEXT BIG DISRUPTION TO CREATE HYPER-PERSONALIZED GAMING EXPERIENCES

Khaja Vali Sheikh
Chief Operating Officer at AVGCI

The gaming and animation industries have undergone tremendous transformation in recent years, driven by rapid technological advancements and evolving consumer preferences. The integration of technologies like Artificial Intelligence (AI), Machine Learning (ML), Virtual Reality (VR), and Augmented Reality (AR) has revolutionized how games are developed and consumed, creating more immersive and personalized experiences. The rise of cross-platform gaming and cloud-based services has further expanded the accessibility of games, blurring the lines between devices and creating new opportunities for engagement.

As the gaming industry becomes more competitive globally, especially with strong competition from hubs like Japan, South Korea, and Hollywood, companies must stay ahead through constant innovation, the development of original intellectual property (IP), and strong partnerships within the ecosystem. This has also highlighted the growing skills gap in the industry, emphasizing the importance of specialized education and training programs that prepare the next generation of talent.

At the intersection of gaming and visual effects (VFX), we see the convergence of workflows that enhance both industries, accelerating the pace of content production and driving the future of interactive entertainment. Issues such as ethical monetization, diversity in representation, and the role of independent creators are becoming more critical as the industry moves forward.

*To explore these dynamics and the future of gaming, Education Post's **Prabhav Anand** interviewed **Khaja Vali Sheikh**, Chief Operating Officer at AVGCI, who shares his insights on the evolution of the gaming industry and the trends shaping its future.*

Q How has the gaming industry evolved in terms of technology and consumer engagement over the past decade, and where do you see the next major disruption coming from?

Over the past decade, the gaming industry has evolved rapidly, with advancements in technology and increasing consumer engagement. We've seen the shift from traditional console gaming to mobile and cloud gaming, which offers flexibility and accessibility. New technologies such as Augmented Reality (AR), Virtual Reality (VR), and block chain are reshaping the way consumers engage with gaming. The next major disruption will likely come from the intersection

of AI and immersive technologies, enabling games to provide hyper-personalized experiences through adaptive storylines and interactive environments. We also anticipate further growth in cross-platform gaming and the rise of metaverse ecosystems, creating entirely new ways for players to connect and engage.

Q Artificial intelligence and machine learning are becoming integral to gaming and animation. How do you see these technologies reshaping the creative process, and do you believe AI will ever fully replace human creativity?

AI and machine learning are already transforming the creative process by streamlining workflows, automating repetitive tasks, and enabling real-time rendering in both gaming and animation. AI-generated assets, character movements, and dynamic environments have enhanced the efficiency of development. However, AI will not replace human creativity but augment it. While AI can simulate and assist, it lacks the unique emotional depth and cultural context that human creators bring. AI will serve as a powerful tool, helping creators to focus on storytelling, innovation, and emotional engagement, which are core aspects of the creative process.

Q Cross-platform gaming and streaming services like cloud gaming are gaining momentum. What are the biggest challenges in delivering a seamless multi-platform experience for players, and how can the industry overcome them?

Delivering a seamless multi-platform experience involves overcoming technical challenges like latency, data synchronization, and performance optimization across devices. Players expect consistent gameplay across PCs, consoles, and mobile devices, which requires sophisticated cloud infrastructure and efficient data management. To address these challenges, the industry must invest in 5G technology, cloud infrastructure, and scalable backend services. Standardizing development tools and engines that work across platforms will further streamline the process, allowing for smoother cross-device experiences.

Q The gaming and VFX industries are fiercely competitive on a global scale. What strategies do you believe are crucial for companies to stay ahead, especially with competition from major hubs like Japan, South Korea, and Hollywood?

To stay competitive globally, companies must focus on innovation, talent development, and strong partnerships. Leveraging emerging technologies like real-time rendering, AI-powered tools, and cloud-based workflows will keep companies at the cutting edge. It's also crucial to develop original intellectual property (IP) that resonates with global audiences. Building collaborative ecosystems where studios, developers, and educational institutions work closely is vital for cultivating talent and fostering innovation. Additionally, India's strategic advantage of cost-effective and high-quality production will help maintain its global competitiveness.

Q Given the demand for specialized skills in gaming, animation, and VFX, how does the industry address the growing skills gap, and what role should education and training programs play in preparing the next generation of talent?

The growing skills gap is a significant challenge in the AVGC sector. To address this, we need more comprehensive education and training programs that integrate cutting-edge technology and industry-standard practices. Collaborating with educational institutions to create specialized courses in gaming, animation, and VFX is crucial. Apprenticeships, internships, and mentorship programs will play a key role in bridging this gap. Government support through skill development initiatives and policies, like Telangana's IMAGE policy, which focuses on infrastructure and talent development, will be instrumental in preparing the next generation of professionals.

Q Monetization in gaming has shifted with the rise of microtransactions, freemium models, and downloadable content (DLC). How do you see these revenue models evolving, and what ethical considerations should companies keep in mind to avoid exploitation of players?

The rise of microtransactions, freemium models, and DLC has created new revenue streams for gaming companies. As these models evolve, companies should aim for transparency and fair pricing. Ethical considerations include ensuring that these models do not exploit players, particularly younger audiences. It's essential to design systems that reward skill rather than encouraging players to spend excessively. Offering a balance between paid and earned rewards, along with parental controls, will help maintain player trust and engagement without crossing ethical boundaries.

Q VFX has become increasingly crucial to creating immersive gaming experiences. How do you see the convergence of VFX and gaming workflows shaping the future of both industries?

The convergence of VFX and gaming

workflows is accelerating with real-time technologies like Unreal Engine and Unity. These platforms are breaking down the traditional silos between film production and game development, allowing for seamless cross-industry collaboration. As VFX and gaming techniques continue to merge, we'll see faster production cycles, more interactive content, and higher visual quality across both industries. This convergence is poised to create new job opportunities and push the boundaries of storytelling.

Q Diversity and representation in both gaming characters and development teams are ongoing challenges in the industry. How important is it for gaming and animation to embrace inclusivity, and what steps can be taken to create more diverse and representative content?

Embracing diversity is critical to the industry's growth. A more inclusive approach to game development ensures that a wider array of voices, cultures, and experiences are reflected in the content. This not only makes games more relatable to diverse audiences but also enriches the storytelling process. Companies should actively recruit from diverse backgrounds and provide opportunities for underrepresented groups. Additionally, fostering a workplace culture of inclusion and ensuring diverse characters and narratives in games will help the industry create more authentic and globally resonant content.

Q Virtual reality (VR) and augmented reality (AR) are increasingly integrated into gaming and animation. How close are we to seeing VR and AR become mainstream, and what technological barriers still need to be addressed?

While VR and AR have made significant strides, there are still technological barriers to overcome before they can be considered mainstream. The primary challenges include hardware affordability, accessibility, and content variety. Once devices become more affordable and mobile-friendly, and content creation expands to include more diverse and engaging experiences, we can expect broader adoption. Advancements in haptic feedback, motion tracking, and 5G will further support the growth of these technologies.

Q The rise of independent studios and creators in gaming and animation has democratized content creation. How do you view the indie scene's role in pushing innovation, and what challenges do indie creators face in breaking into a crowded market?

The indie scene plays a critical role in pushing innovation by experimenting with unconventional storytelling, mechanics, and art styles. These creators often drive trends that larger studios later adopt. However, indie creators face significant challenges, including limited funding, market visibility, and access to distribution platforms. Government support in the form of grants, incubators, and platforms like TVAGA's IndiaJoy can help address these challenges, providing indie studios with the resources and exposure they need to thrive. EP

INTEGRATING AI IN EDUCATION TRANSFORMS LEARNING

Chandrasekhar Buddha
Chief Executive Officer (CEO) of Anuvadini AI

Artificial Intelligence (AI) is increasingly playing a pivotal role in transforming how students learn, particularly in overcoming language barriers. **Chandrasekhar Buddha**, Chief Executive Officer (CEO) of Anuvadini AI, an All India Council for Technical Education (AICTE) initiative, shared valuable insights on this transformation in a recent interview with Education Post's **Prabhav Anand**. Anuvadini AI's core mission is to enhance accessibility and inclusivity in education by providing tools that allow seamless translation of educational content into 22 Indian languages and 24 foreign languages. This aligns with the National Education Policy's (NEP) emphasis on multilingual education, aiming to bring high-quality learning materials to students in underserved regions.

Q Could you share with us the vision and objectives of integrating AI in the Indian education system? How do you see AI transforming the accessibility and quality of education in the coming years?

The vision behind integrating AI into the Indian education system is to make education more inclusive, accessible, and adaptable to the diverse needs of students. Anuvadini AI aims to break language barriers by offering books, audios, videos, & research papers in 22 Indian languages, which directly aligns with the National Education Policy's focus on multilingualism. Over the next few years, AI will help deliver personalized learning experiences, democratize access to quality education, and make learning resources available to underserved regions. By using Anuvadini AI tools, students can engage more deeply with their subjects, while teachers can use data to tailor instruction and improve student outcomes.

Q Multilingualism is a major focus of the National Education Policy. How do you believe promoting education in regional languages will impact students' overall academic performance and innovation, especially in rural areas?

Promoting education in regional languages significantly enhances student engagement and understanding, particularly in rural areas where students may struggle with Hindi or English as the primary mediums of instruction. Multilingual education, powered by tools like Anuvadini AI, enables students to access academic content in their native language, increasing both confidence and creativity. Learning in their mother tongue allows students to grasp concepts more deeply, ultimately leading to better academic performance and fostering innovation. Regional language education also plays a key role in preserving cultural heritage and promoting diversity of thought.

Tools like Anuvadini AI play a crucial role in making education accessible by translating academic content into 22 Indian and 24 foreign languages. This removes language barriers, allowing students to participate fully in the learning process. By learning in their mother tongue, students are better equipped to perform academically and contribute innovative ideas, helping bridge the urban-rural education gap.

Furthermore, multilingual education helps preserve India's rich linguistic and cultural heritage while promoting diversity in thought. It encourages students to think critically and creatively in a language they are comfortable with, driving innovation in fields like agriculture, commerce, and scientific research. Through AI-powered translation tools like Anuvadini AI, the goal of enhancing both educational quality and accessibility across India's diverse linguistic landscape is well within reach.

Q Collaboration with regulatory bodies like AICTE, UGC and NCERT is crucial for educational initiatives. Could you discuss the role of these partnerships in fostering a more inclusive and diverse educational landscape?

Collaboration with regulatory bodies like the AICTE, UGC (University Grants Commission) and NCERT (National Council of Educational Research and Training) is essential in shaping an inclusive and diverse educational landscape, particularly in a linguistically diverse country like India. These partnerships help integrate advanced AI-driven tools such as Anuvadini AI into the educational framework in alignment with the goals of the National Education Policy (NEP). By working hand in hand with AICTE, UGC and NCERT, AI tools like Anuvadini AI support the creation of region-specific content and ensure that educational materials meet national standards while being accessible in multiple regional languages.

Anuvadini AI has successfully translated and drafted over 250 books for AICTE, 100+ books for NCERT, and 721 books for NIMI (Ministry of Skill Development and Entrepreneurship). A key innovation is the world's first tool that allows bulk document and image translation and editing, making it easier to handle massive volumes of educational content at once. Anuvadini AI can instantly translate bulk documents & books into 22 regional Indian languages and 24 foreign languages—removing language barriers and making learning accessible to all.

In addition to bulk document translation, Anuvadini AI's book translation feature allows seamless content translation, enabling students, teachers, and researchers to translate books in real time. This significantly reduces the time needed to make educational content available in 22 regional Indian languages and 24 foreign languages, promoting a more inclusive learning environment where students can engage with academic material in their native languages for better comprehension and improved learning outcomes.

For example, Anuvadini AI Chutki allows seamless translation of educational documents and multimedia content into 22 regional Indian languages and 24 foreign languages, ensuring that linguistic diversity is no longer a barrier to education. This promotes a more inclusive learning environment where students, especially from rural areas, can engage with academic content in their native languages, leading to better comprehension and learning outcomes.

Moreover, such collaboration helps develop targeted resources for teacher training and curriculum development, making education more adaptable to regional contexts. This coordinated effort not only enhances inclusivity but also promotes innovation, as students are better equipped to understand complex concepts in their mother tongues, fostering creativity and academic growth.

Furthermore, partnerships with regulatory bodies help implement AI solutions that support the diverse learning needs of students, such as Anuvadini AI Bujji, which preserves the formatting of educational documents while translating them, and SpeakPic, which generates copyright-free visual content for enhanced learning. These initiatives, endorsed by bodies like UGC and NCERT, ensure that India's educational system becomes more inclusive, diverse, and innovative, reflecting the core values of Ek Bharat Shreshtha Bharat.

Q Artificial Intelligence is increasingly being integrated into educational platforms. Can you explain how AI is used to facilitate learning, particularly in addressing language barriers or providing personalized learning experiences?

Artificial Intelligence (AI) is revolutionizing the educational landscape by enhancing learning experiences, particularly in addressing language barriers and providing personalized learning solutions. One of the most significant impacts of AI is its ability to bridge linguistic gaps in a multilingual country like India. Tools such as Anuvadini AI facilitate the seamless translation of educational content into regional languages, making academic materials accessible to students who may struggle with Hindi or English as mediums of instruction. By supporting 22 Indian and 24 foreign languages, Anuvadini AI ensures that students can learn in their native tongues, improving comprehension and engagement, especially in rural areas.

AI-driven platforms like Chutki and Bujji also offer personalized learning experiences by allowing students to interact with content through multiple modes, such as text, voice, and visual input. Chutki, for instance, enables real-time translation of lengthy academic texts, including math equations and special characters, allowing students to explore subjects at their own pace. Similarly, SpeakPic, an AI-powered tool, helps generate copyright-free images using voice or text inputs, promoting creativity and enhancing visual learning.

Anuvadini AI further enhances the learning experience by offering advanced video, audio, and OCR (Optical Character Recognition) translation capabilities, ensuring that multimedia content can be translated seamlessly across multiple languages. This comprehensive feature enables educators and students to interact with various formats of educational content without language being a barrier.

For video translation, Anuvadini AI allows users to transcribe and translate video lectures, tutorials, and educational clips into 22 Indian and 24 foreign languages. Whether it's a classroom recording or an online course, the tool preserves context and meaning while making the content accessible to students in their native language.

In terms of audio translation, Anuvadini AI can handle podcasts, lectures, and audio-based learning materials, converting them into text and translating them into any supported language. This feature is particularly beneficial for audio-centric learners or those who prefer consuming information via audio, enabling them to learn without limitations posed by language differences.

The OCR translation feature of Anuvadini AI stands out by enabling the extraction and translation of text from images, scanned documents, handwritten notes, and posters/banners. Whether it's a scanned textbook page, a research paper, or handwritten notes, the tool accurately identifies the text, translates it into the desired language, and preserves the original formatting, including mathematical equations, diagrams, and special characters. This feature is especially valuable for digitizing and translating older educational materials, ensuring that historical and printed academic resources are accessible to students and educators in a linguistically diverse environment.

By integrating video, audio, and OCR translation capabilities, Anuvadini AI makes it easier for students and educators to access a vast array of educational content, breaking down language barriers and promoting a more inclusive and dynamic learning environment.

AI algorithms are further utilized to create personalized learning paths for students by analyzing their learning styles, strengths, and weaknesses. These adaptive learning systems can provide tailored educational content, assignments, and assessments, ensuring that each student receives support according to their unique needs. This approach helps in addressing learning gaps, ensuring that students of varying abilities can progress at their own pace.

Q With the rise of AI-based educational tools, what early data or feedback have you received on their effectiveness in enhancing student outcomes? Are there any specific metrics or case studies that have been particularly promising?

Early feedback on AI-based tools like Anuvadini AI has been overwhelmingly positive, particularly for its ability to enhance comprehension among students who previously struggled with language barriers. The platform has received accolades for enabling seamless translation of educational content into native languages, greatly benefiting students in rural areas.

Case studies have demonstrated that when students were provided with academic materials in their native languages, they showed significant improvements in engagement, comprehension, and retention. For example,

in rural regions where language posed a significant challenge, students who accessed translated content reported increased confidence in learning. Metrics such as test scores, participation in class, and teacher feedback reflected a positive shift in learning outcomes.

Anuvadini AI's voice-based multilingual forms are a game changer, particularly for students in rural areas where language barriers often prevent full participation in educational processes. This feature allows students to fill out forms in their native languages by simply speaking. After selecting their preferred language, the form presents questions in that language, and students can respond using voice input, providing answers in their chosen language.

This voice-based functionality significantly boosts accessibility for students who may struggle with written communication, ensuring they can participate in administrative tasks, surveys, or assessments without the need for proficiency in Hindi or English. By eliminating language- related challenges in form-filling processes, more students from rural areas are able to complete enrollment and registration forms with ease, leading to higher enrollment rates and increased participation in educational programs.

The ease of using voice commands in local languages encourages more accurate form submissions, reducing errors and frustration for students unfamiliar with official or non-native languages. As a result, the inclusion of voice-based forms not only supports a more inclusive educational experience but also encourages more students to enroll in programs they might have otherwise found inaccessible due to language barriers. This ultimately fosters a broader reach and greater educational inclusion in linguistically diverse regions across India.

Q What are the main technological and infrastructural challenges you've encountered in implementing AI-driven educational solutions across such a diverse country? How do you plan to overcome these barriers?

In implementing AI-driven educational solutions like Anuvadini AI across India's diverse linguistic and cultural landscape, several technological and infrastructural challenges have emerged. One primary issue is the significant variation in technology access among students, particularly in rural and remote areas where internet connectivity may be sporadic or unavailable. This gap creates barriers to utilizing advanced AI tools effectively.

Additionally, the multilingual nature of India poses challenges in developing AI systems that can accurately translate and adapt content across numerous regional languages. Ensuring that the AI understands and respects the nuances of each language and dialect is crucial for providing quality educational resources.

To overcome these barriers, Anuvadini AI is actively working on several strategies. First, it aims to enhance offline capabilities, allowing students in low-connectivity areas to access educational content without relying solely on the internet. Second, partnerships with local educational institutions and government bodies will facilitate infrastructure improvements, such as providing reliable internet access and digital devices in underserved regions.

Furthermore, continuous collaboration with linguistic experts and educators will ensure that the AI's language processing capabilities are robust and culturally relevant. By focusing on these areas, Anuvadini AI strives to create a more inclusive and effective educational environment for all students across India.

Q India's goal is to provide educational content in regional languages over the next few years. Can you share the progress on this front and any specific targets that have been achieved or are in the pipeline?

Anuvadini AI has made significant strides in supporting India's goal of providing educational content in regional languages. The platform has successfully translated a wide array of educational materials into 22 regional languages, ensuring that students from diverse linguistic backgrounds can access and comprehend essential academic content. This initiative is particularly crucial for students in rural areas, where proficiency in Hindi or English may be limited.

In terms of specific progress, Anuvadini AI has collaborated with educational institutions and regulatory bodies like NCERT to align its content with national curriculum standards, thereby enhancing the quality and relevance of translated materials. The platform has also introduced features that allow users to seamlessly translate lengthy documents and textbooks, further facilitating the learning process.

Looking ahead, Anuvadini AI is working on expanding its language offerings to include additional dialects and regional languages to cater to an even broader audience. There are plans to launch pilot programs to evaluate the impact of these translations on student engagement and academic performance. Overall, Anuvadini AI is positioned to play a pivotal role in transforming India's educational landscape by promoting inclusivity and accessibility through regional language education.

Q In your opinion, how does offering competitive exams in multiple languages influence students' preparation and performance, especially for those from non-English speaking backgrounds?

Offering competitive exams in multiple languages has greatly benefited students from non- English speaking backgrounds. Anuvadini AI is contributing by translating preparatory material into regional languages, leveling the playing field for students who may not be proficient in English. This multilingual approach reduces the cognitive load on students, allowing them to focus more on the content of the exam rather than struggling with the language of instruction. As a result, students are better prepared, and we've seen improvements in exam scores, particularly in rural areas.

Q How do you incorporate feedback from students and educators to improve AI-based platforms? Could you share any examples where feedback led to significant platform enhancements?

Student and educator feedback is crucial to improving AI-based platforms. At Anuvadini AI, we regularly collect user feedback to fine-tune the translation models and improve user experience. For instance, after receiving input that technical terms in science and mathematics weren't accurately translated in certain languages, we enhanced our AI algorithms to better handle subject-specific jargon. These improvements have led to greater accuracy and higher user satisfaction. The iterative feedback loop ensures that the platform continuously evolves to meet user needs.

Q Beyond education, AI has applications in various sectors. Can you discuss any partnerships or initiatives where AI is being used in fields like agriculture, healthcare, banking, insurance, manufacturing, defense/ security, or governance to drive innovation and development?

AI is making transformative contributions across multiple sectors, with initiatives like Anuvadini AI addressing multilingual needs in agriculture, healthcare, governance, and education.

Agriculture

Anuvadini AI supports farmers by offering multilingual platforms where they can access vital information about crop management, pest control, and market trends in their native languages. This enables farmers to make informed decisions, boosting productivity and sustainability. By breaking down language barriers, Anuvadini AI empowers rural communities with the knowledge they need to improve farming practices and enhance livelihoods.

Healthcare, Banking, Insurance, & Governance

In healthcare, Anuvadini AI is instrumental in bridging communication gaps between patients and providers, especially in rural areas where language differences can lead to misunderstandings. By providing voice-enabled multilingual forms, patients can easily fill out medical forms in their regional languages,

accurately communicating their medical histories and needs. This capability enhances the quality of care and fosters trust between patients and healthcare providers. Additionally, Anuvadini AI facilitates the translation of medical records and health education materials, improving overall patient comprehension and satisfaction.

Similarly, in the banking and insurance sectors, Anuvadini AI enhances customer service by offering multilingual support. By enabling customers to access information and complete forms in their preferred languages, the platform helps reduce confusion and ensures that clients fully understand the terms and conditions of financial products. This is particularly vital in regions with diverse linguistic populations, empowering individuals to make informed financial decisions. Anuvadini AI also aids in translating critical documentation, such as policy details and account statements, further promoting transparency and accessibility in financial services.

Anuvadini AI plays a critical role in governance by enhancing public service delivery through multilingual access. Citizens can complete government service forms in their preferred languages, ensuring equal access to important resources and information. Collaborating with government agencies, Anuvadini AI helps translate key documents, public notices, and educational materials, promoting transparency and civic engagement among diverse linguistic communities.

Manufacturing

In the manufacturing sector, Anuvadini AI enhances communication and efficiency by providing multilingual support, ensuring that workers from diverse linguistic backgrounds can understand operational procedures, safety guidelines, and quality control standards. By facilitating the translation of training materials and manuals, it improves onboarding for new employees, enabling them to grasp complex concepts in their native languages. Real-time multilingual communication allows for quick issue resolution and collaboration among teams, while translated quality control checklists and compliance documents help maintain industry standards. Additionally, multilingual labels and instructions ensure that workers can easily identify materials and equipment, fostering a safer and more efficient workplace. This technology further bolsters productivity by enabling instant translation of spoken or written language, which is crucial for coordinating tasks among multilingual teams during meetings, training sessions, and daily operations. For instance, when a supervisor gives instructions in one language, Anuvadini AI can instantly translate those instructions into the native languages of the workers present, ensuring that everyone understands their tasks without delay. Moreover, real-time translation facilitates customer interactions and support, allowing manufacturers to engage effectively with clients and partners from different linguistic backgrounds, ultimately contributing to improved collaboration, efficiency, and overall operational success.

Comprehensive real-time detection & alert systems

Advanced comprehensive real-time detection & alert systems provide significant benefits in education, particularly during examinations by improving cheating detection, seating management, and surveillance:

- **Cheating Detection:**
  - **Real-Time Monitoring:** Detects suspicious behavior such as unauthorized device use or paper swapping, automatically flagging potential cheating.
  - **Object Detection:** Identifies prohibited items like smartphones or notes, triggering instant alerts.
- **Seating Management:**
  - **Automated Verification:** Ensures students are seated according to the seating plan, preventing unauthorized seat swapping.
  - **Occupancy Tracking:** Monitors empty or occupied seats, maintaining proper seating arrangements.
- **Surveillance:**
  - **360-Degree Monitoring:** Provides continuous real-time surveillance, flagging suspicious activity in large exam halls.
  - **Immediate Alert:** The real-time alert will be sent to the admin after instant detailed analysis if cheating claims arise, ensuring accountability.

These tools create a secure, efficient exam environment, upholding academic integrity and ensuring fair testing.

Through these diverse applications, Anuvadini AI is driving innovation across sectors while ensuring that AI's benefits are inclusive, accessible, and tailored to meet the multilingual needs of all communities.

80 YEARS AFTER HIROSHIMA, ATOMIC BOMB SURVIVORS WIN NOBEL PEACE PRIZE AMID GLOBAL NUCLEAR TENSIONS

Toshiyuki Mimaki, leader of Nihon Hidankyo, calls for the abolition of nuclear weapons, urging the world to act before it's too late.

PRABHAV ANAND

The scenes of atomic devastation—cities leveled to dust, bodies consumed by flames, and the haunting silhouette of a mushroom cloud—forever changed the course of history.

The atomic bombings of Hiroshima and Nagasaki by the United States in 1945 showcased the unimaginable horrors of nuclear warfare, with tens of thousands dying instantly and many more suffering in the aftermath from radiation-related illnesses.

From this devastation, a group of survivors emerged, not only battling the physical effects of radiation but also societal isolation. For decades, they lived as reminders of humanity's darkest capabilities, often ostracized for representing the painful reality of nuclear warfare.

On October 11, Nihon Hidankyo, a group representing these survivors, was awarded the 2024 Nobel Peace Prize. The group's decades-long mission to advocate for nuclear disarmament was recognized by the Norwegian Nobel Committee, which praised them for "bearing witness to the horror of nuclear weapons and demonstrating why they must never be used again."

The Nobel committee emphasized the critical importance of their testimony, acknowledging that the 100,000 remaining survivors of the bombings have made it possible for the world to understand the devastation of nuclear warfare in a deeply personal way. Jorgen Watne Frydnes, the committee's chairman, stated, "Their voices describe the indescribable and help us confront the unthinkable pain caused by nuclear weapons."

While nuclear weapons have not been deployed in war since those attacks in August 1945, the committee noted the growing global threat. Many nuclear powers continue to modernize their arsenals, and the risk of proliferation looms, with rising

Shigemitsu Tanaka, a member of Nihon Hidankyo, reacting in Nagasaki, Japan, after the Nobel announcement on October 11. Credit: via Reuters

tensions in the Middle East and Asia, and Russian President Vladimir V. Putin's threats to use tactical nuclear weapons in Ukraine.

"At this moment in human history, it is crucial to remind ourselves of the catastrophic destruction that nuclear weapons bring," the Nobel committee declared.

The legacy of Hiroshima and Nagasaki remains a powerful reminder. Nearly 80 years ago, on August 6 and 9, 1945, the U.S. dropped two atomic bombs—codenamed "Little Boy" and "Fat Man"—on these cities, killing 120,000 people instantly.

Another 120,000 succumbed to burns, injuries, and radiation-related diseases over the following months. While the bombings hastened the end of World War II, they also ignited a global nuclear arms race, with tests carried out from the deserts of China to the atolls of the South Pacific, spreading lethal radiation far and wide.

Today, nine countries, including the United States, Russia, and China, possess nuclear weapons. According to the Union of Concerned Scientists, nearly 13,000 nuclear warheads are in existence worldwide, posing a continual threat to global peace.

In Japan, the bombings left scars far deeper than the physical destruction of the cities. Once an imperial power, Japan embraced a pacifist future, embedding peace into its Constitution and national identity.

Yet, despite this, many survivors, known as hibakusha, found themselves marginalized. They were seen as a painful reminder of the bombings, both in Japan and abroad. Terumi Tanaka, a prominent member of Nihon Hidankyo, was shocked during his visit to the United Nations in 1976 by how little the world seemed to know about the bombings' true death toll.

The hibakusha also faced social stigma within Japan. There was a fear that radiation-related illnesses were contagious, which led to struggles in both marriage and employment.

Sunao Tsuboi, former chairman of Nihon Hidankyo and a survivor of the Hiroshima blast, recounted how he and his fiancée attempted suicide after her parents forbade their marriage due to his status as a survivor.

Thankfully, they survived, married, and Tsuboi went on to meet President Barack Obama during his historic visit to Hiroshima in 2016.

As hibakusha shared their stories, Nihon Hidankyo formed in 1956 to advocate for nuclear disarmament, standing as a powerful testament to

The devastation of Hiroshima in the aftermath of the atomic bombing in 1945, in a photo released by the United States government. Credit: United States Army

survival. However, the journey wasn't without hardship.

Many survivors felt abandoned by the Japanese government and oppressed by the United States during the post-war occupation. Despite this, they continued their mission to ensure the horrors they lived through would never be repeated.

Japan's relationship with nuclear power is complicated. As the nation grew into a technological powerhouse, it embraced nuclear energy, only to be reminded of its dangers after the 2011 Fukushima disaster. Since then, most of the country's nuclear reactors have remained offline, a sobering reminder of the risks tied to nuclear technology.

Despite their advancing age, hibakusha continue their fight against nuclear proliferation, and the Nobel committee acknowledged their contribution to establishing what has been called the "nuclear taboo."

However, this taboo is now facing threats from modern nuclear powers and emerging conflicts. Henrik Urdal, director of the Peace Research Institute Oslo, emphasized the relevance of the award, stating, "In an age of automated weaponry and AI-driven warfare, the message of disarmament is not just about history, but about our future."

While the aging hibakusha remain at the forefront of the movement, the hope is that a younger generation in Japan will carry forward their mission. Nevertheless, Japan's position is precarious, surrounded by nuclear powers such as Russia and China. From Laos, where he was attending a regional summit, Japanese Prime Minister Shigeru Ishiba called the awarding of the Nobel Peace Prize to Nihon Hidankyo "deeply significant." However, Ishiba, a former defense minister, has also advocated for a stronger military posture and even suggested that the U.S. could share its nuclear arsenal with Japan.

While public support for nuclear disarmament remains high in Japan, some younger citizens have expressed belief in nuclear deterrence—a strategy that involves maintaining nuclear arms to prevent attacks.

Last year's G7 summit, held in Hiroshima, saw world leaders release a statement that acknowledged the ongoing existence of nuclear weapons but did not call for outright disarmament. Instead, they argued that nuclear weapons, "as long as they exist, should serve defensive purposes."

In response, Toshiyuki Mimaki, the current chairman of Nihon Hidankyo, implored the world to take action before time runs out. "Please abolish nuclear weapons while we are still alive," he urged.

PRIORITIZING TRAVEL OVER MATERIAL POSSESSIONS

A NEW ERA FOR INDIAN YOUTH

Pragya Kumari

Travel has not been limited to widening one's horizon, but it has become a way of maintaining an identity. Nowadays, individuals travel to gain experience and reveal unique, hidden destinations that showcase their individuality.

"The world is a book, and those who do not travel read only one page."
-Vikram Seth

The values of the younger generation in India are undergoing a great change. On one hand, where the older generations might have measured success by material wealth—big homes, flashy cars, and branded clothing, on the other hand, today's youths, particularly those aged 16 to 45, seem to be making their own rules.

The youth now prioritize travel experiences over the need for material possessions, and this shows how young Indians view success and happiness, which is not just a temporary vogue highlighting the importance given to mental health, personal introspection, and wide exposure.

But every change comes with difficulties, and that could be social, psychological, or economic variables.

Youths are influencing the future of the economy, turning individual lifestyles, and making a drastic change in how businesses function by giving more value to travel.

For many years, materialism has been the priority in India and the guiding principle for success. Whether in small towns or metropolitan cities, status symbols like big homes and cars have been linked with how good somebody's job is.

Research suggests that in India, 64% of Gen Z and millennials spend money on experiences rather than material possessions.

Similarly, a 2023 Deloitte report revealed that inclination towards spending on experiences places higher value than on physical things among 73% of millennials worldwide. Deloitte is a multinational professional services network based in London, England.

A report by Kantar, a market research company based in London, England, supported these findings, stating that over 86% of Indian millennial consumers like to spend on experiences.

"When it comes to prioritization, 'travel and seeing the world' ranked as most important to this generation in India (81%), investing in education/ professional training came a close second (76%), and more material possessions like buying gadgets and clothes ranked the lowest (51%)," says the survey by Booking.com, a global tech travel platform.

Gradually, the global economy is shifting to a more experience-driven culture, and the youths are not lagging behind. They are accepting the concept that happiness is found in experiences and memories and give more importance to them over materialism.

According to Raghuram Rajan, the former Reserve Bank of India (RBI) Governor, "Experience, learning, and the broadening of your mind through travel can be far more valuable than material wealth. Youth must focus on creating memories, not just amassing possessions."

A 2023 survey of YouGov, an international online research data and analytics technology group, suggests that 65% of Indians between the ages of 18 and 34 now give more importance to travel.

The notions of the older generation that travel was a luxury only affordable by the wealthy and that hard-earned money was better spent on accumulating physical assets like homes or vehicles rather than spending on travel are continuously being challenged by the younger generations.

This change provides a new vision about life that signifies development, education, and well-being.

For any individual, travel is all about the 360-degree development, not merely the escape or utilization of one's free time.

Travel allows people to gain a deeper understanding of different people and different cultures and the vision to look at the world from a different angle.

In a podcast with motivational speaker and social media influencer Raj Shamani, Bollywood actor Pankaj Tripathi advised the youth of India to travel to different parts of the country to understand the types of food, culture, and thoughts.

He believes that visiting every corner of India will help one learn about the problems of our country, in building empathy and broadening one's worldview.

He stressed that experiencing different regions of the country makes one more accepting and helps in becoming a better person beyond the confines of urban life or social media.

There are many driving forces behind this significant shift, and social media is one of them. These social media platforms have completely changed the point of view of youths.

Amazing pictures, breathtaking adventures, different cultures, and engaging travelogues have made people curious to travel.

But no change comes at zero price, and so is social media. The biggest demerit of these platforms is the "fear of missing out (FOMO).

"48% of young Indians in the 18–30 age range stated social media as their main influence in their decision to travel," reads a 2023 Statista survey.

Travel has not been limited to widening one's horizon, but it has become a way of maintaining an identity. Nowadays, individuals travel to gain experience and reveal unique, hidden destinations that showcase their individuality.

The other drawback of social media is that general people somewhere feel the pressure or desire to live a life that influencers live.

In order to build a unique identity and maintain it, they spend more money than they can actually afford. This leads to unhealthy comparisons and even financial difficulty.

Dr Rituparna Patgiri, a sociology professor at IIT, Guwahati, told Education Post, "A lot of Indian millennials and youths are prioritizing travel over material possessions, driven by several factors."

According to her, one key reason is the perception of life as precarious and uncertain, leading many to view tangible possessions as less meaningful compared to experiences that offer personal growth and fulfillment.

"It is also because nowadays there is an emphasis on consumerism, showing off on different social media platforms. So, material possession doesn't create that kind of impact as travel does," said Dr Patgiri.

She emphasized that travel, on the other hand, has become a way for young people to define themselves, whether they are exploring solo, with friends, partners, or families.

"This shift towards valuing experiences over possessions reflects a broader cultural change, where identity and status are increasingly tied to experiences—especially those that can be shared and celebrated in the public eye, rather than to the accumulation of things," she added.

Rising disposable income, low-cost airlines, and affordable lodging options are among the few forces that influence young people's desire to travel and explore.

As per MakeMyTrip's State of Travel in India 2023 report, "58% of Indians aged 25 to 34 now travel at least twice a year, often opting for short domestic or foreign vacations."

The freedom to work remotely is one of the most influential reasons that young professionals have to travel more.

The tendency of "workcations," or working while on vacation, has grown, particularly since the COVID-19 pandemic. This movement introduces unprecedented freedom, allowing people to blend productivity and leisure.

This trend is not temporary, since Gen Z and millennials value maintaining a healthy work-life balance.

Spiritual leader Sadhguru emphasized the power of traveling, saying, "Instead of accumulating things, invest in experiences. Travel, learn, and grow. Material possessions fade, but experiences shape your life."

Contrary to popular belief, young Indians presently place an equal value on emotional well-being as on physical health. They understand the value of mental health and the advantages that travel may provide them.

Travel has gradually become a significant way to de-stress oneself in today's world.

Mental health conditions like anxiety and depression have become very common in Indian youths, as per the data released by the National Mental Health Survey of India (2015–16).

The World Health Organization (WHO) forecasted that depression is going to be the world's largest reason for disability by 2025 and that due to this, youths are using travel as a kind of therapy.

Travel let them rejuvenate their mental health, recharge themselves, and get back to daily life.

Mark Twain, American author of famous books like Adventures of Huckleberry Finn and The Adventures of Tom Sawyer, said, "Travel is fatal to prejudice, bigotry, and narrow-mindedness, and many of our people need it sorely on these accounts. Broad, wholesome, charitable views of men and things cannot be acquired by vegetating in one little corner of the earth all one's lifetime."

Travel encourages self-reflection and personal development. It exposes people to new ways of thinking, living, and being, whether through solo travel or interactions with others from many walks of life.

Travel experience leads people towards increased empathy, self-awareness, and a better understanding of the world around them. Like other trends, travel also does not always come positively; caution remains there.

Like material possessions, if not walked carefully, travel may become just another means to flaunt one's status or show off.

Furthermore, travel may not be a realistic aim for young Indians from families with low incomes.

If people with the financial resources to travel regularly drive the move toward experience over material possessions, we risk alienating significant segments of society who continue to struggle to meet their fundamental requirements.

Sanchari Basu Chaudhuri, a sociologist working as a fellow at The India Centre, FLAME University, told Education Post, "YOLO (You Only Live Once) defines today's youth, driving them toward experiences over material possessions. Traveling tops the list as it offers an immersive experience in different cultures, cuisines, geography, and climate."

"It has become more prominent due to factors like hybrid work options, higher incomes, and social media influence. Youth prioritize travel as it has evolved into a lifestyle choice that reflects an emphasis on exploration and personal growth," she added.

Prioritizing travel over material belongings represents an exciting and progressive development in the thinking of Indian millennials.

The world is all set to witness a new kind of luxury, the luxury not defined by what you have physically, rather than where you go, what you learn, and the memories you create.

The young Indians understand the innate advantage of traveling, which gives them the opportunity to explore the world, view this world with their own vision, feel empathy, and also rejuvenate themselves.

While sharing her experience, USA-based sociologist and author Jan Yager told Education Post, "My first international trip was when I was 20 years old, and it was the beginning of a lifelong commitment to getting outside of my country as I explored other countries and cultures, making friends in places as far away as India and Australia."

"As I write in my book, 'Around the world in 80 ways: Make your travel dreams come true no matter how much time or money you have to spend,' that initial trip was "eye-opening and the beginning of a life-long habit that has enriched my life immeasurably through the people I have met, the sights I have seen, and the history I have learned about. Those experiences are better than anything material!" she added.

Every aspect of any trend needs to be balanced carefully; on one hand, where travel gives us the opportunity of self-realization, on the other, it also has a path that may mislead us towards showing off.

As this trend continues to rise, the young Indians of this generation are paving the way for a day when life experiences will be valued more highly than material belongings and the wealthiest people will be those with the most fascinating stories to share.

Indian industrialist and philanthropist, Ratan Tata, said, "The one thing that I believe is most important in life is to make sure you enjoy it. You must travel and experience the world, not just collect things."

INDIAN PARENTS DITCH TRADITIONAL SCHOOLING FOR A HOLISTIC LEARNING EXPERIENCE FOR THEIR CHILDREN WITH ROAD SCHOOLING

Fatima Hasan

Letting their children escape the rat race of the education system, parents like Ramya Lakshminath and Ankita Ssonawane, have opted for a new way of teaching their children through real-life experiences. Teaching their kids while exploring different places can provide them with an enriched life like any other, they believe.

If there is one thing the COVID-19 pandemic did good, it was freeing many people from the geographical constraints. It gave many among us an opportunity to mobilize freely without limiting daily activities of work or education and gave an option to do it from 'anywhere.'

With limitless opportunities to move around, many parents in India have now started opting for what they call 'Road Schooling' for their children. A novel and experimental way of learning which allows kids to make the world their classroom.

Free from the confines of four walls, daily boring routine, set number of subjects, examinations, and marks, these children find themselves in a whole new world where everything is a learning experience.

One step ahead of homeschooling— a concept that also recently became popular among Indian parents — Road Schooling provides a perfect opportunity for parents and children to learn from real-world experiences.

Driven by a desire to explore the world, Road Schooling allows children to have an immersive learning experience that helps them broaden their horizons and fuel their curious young minds to understand life better.

Children do not have a set curriculum for a year and do not have to do rote learning, still, they learn math, history, language, and science in vivid, hands-on ways.

This method of education instils curiosity and a desire to explore, preparing the children not just academically, but also emotionally and socially. The kids learn the complexities of modern life while on the road.

Ramya Lakshminath, a road schooling parent, mentioned in an interview that she started exploring homeschooling when her children were in the first grade. She found traditional schooling overly focused on homework and lacking in holistic development, with little encouragement for nurturing individual passions.

For Ramya and her family, it wasn't the pandemic that made them take this 'extreme' decision. However, they started their unique experience in 2019 as they believed that travel is a great way for children to discover themselves. The learning process is organic and offers a more fulfilling lifestyle.

She, along with her husband Gangadhar Krishnan, has been roadschooling their 12-year-old twin daughters since 2019.

Ramya wanted her children to enjoy learning and explore subjects deeply if they wished. Although her kids were initially hesitant about road schooling, by fourth grade, they approached her, expressing their interest in being homeschooled.

They have traveled 13,000-kilometer road trips across 15 states and three international borders in a single year.

However, for Aneekah Ssonawane, it was the lockdown during the pandemic that made her pause and reflect. She realized that with her and her husband constantly working and her son Pransh engaged in screen time for long hours, taking time out for oneself was almost impossible.

During the lockdown, even though families were together with everyone working from home, children often lacked the attention they needed. Both parents were occupied with their work, and her son Pransh's childhood was passing by unnoticed, Aneekah shared.

She also had no time for herself. Aneekah then decided to quit her job as an IT manager in 2020 and took a solo trip to Banaras. She also went on a trek to Uttarakhand, pictures of which intrigued her son so much that he insisted his mother take him with her.

Despite being skeptical about how then-5-year-old Pransh would react to long hours spent on the road, she took him on a trip after taking him out of school in January 2021. At that time she thought she would re-admit her son to school the following year.

But to her surprise, the experiences and memories were so valuable that Aneekah realized that the world was as good a classroom as any for her son.

Now every day seems to be a new learning experience for her child. He gets to choose what he wants to learn.

The mother-son duo has till now traveled from Pune to Spiti Valley and has explored Maharashtra, Rajasthan, Himachal, Haryana, Madhya Pradesh, Goa and many more states.

Aneekah said there is always so much to learn as both she and her son explore different subjects through activities. This particular lifestyle allows children to grow with fluidity and adaptation.

While the concept of learning while traveling seems to be wonderful, such a lifestyle comes with its own set of challenges.

Sometimes, it does get difficult for parents to strike a balance between structured learning and spontaneous experiences, but in the end, the pleasures are worth the pain.

"We took a year to experiment with a nomadic lifestyle and understand its nitty-gritty. We did not want to regret our decision. My husband decided to quit his job while I ramped up my work to sustain our endeavour," another set of parents, Santosh and Aanchal Iyer shared.

Santosh and Aanchal Iyer, another of 'Road Schooling' parents, revealed that they spent a year experimenting with the concept to grasp its intricacies and avoid any regrets.

Aanchal increased her workload to support the initiative, while Santosh chose to leave his job to fully commit to the venture.

Before they adopted a nomadic lifestyle, Santosh worked as an IT professional and Aanchal worked as a marketing influencer. Before taking the giant leap of opting for Road Schooling, they began homeschooling their kids.

They say the decision to road school their kids came after they decided to seriously give homeschooling a try as regular schooling made little contribution to their kids' growth.

The couple have adopted a minimalistic lifestyle and made their journey sustainable.

Road schooling also raises questions about children not appearing for exams and tests that they would have otherwise taken in a traditional method of schooling. This challenge is addressed by the National Institute of Open Schooling (NIOS), a government-recognized body that allows homeschoolers to appear for class 10th and 12th exams.

Through NIOS, these kids can gain formal certification equivalent to traditional schooling.

The pass certificates are valid and equivalent to those issued by CBSE, ICSE, and state boards.

As Indian parents continue to embrace this new style of education, their experiences prove that learning can extend far beyond textbooks and the confines of a classroom.

With each journey, the kids get to accumulate not just knowledge, but invaluable life skills, creativity and develop a sense of belongingness.

This transformative shift in educational philosophy has the potential to redefine how we think about education in the 21st century.

So what's it going to be for your children — a brick-and-mortar school or a school from anywhere in the world?

MATHEMATICS CHALLENGE

CMT - SERIES PROBLEMS - by GANIT MATH (गणित मठ)

CMT-2020/ 60 :

For $\alpha < \beta$, *if* $\alpha, \beta \in N$, *are two roots of the equation* :

$$\left(\frac{\sqrt[11]{y^2\left(y^2-25\right)+\frac{589680}{2047}}}{y^2\left(y^2-25\right)+\frac{294912}{2047}}\right) + \left(\frac{\sqrt[11]{y^2\left(y^2-25\right)+\frac{589680}{2047}}}{144}\right)$$

$$= \left(\frac{256}{9}\right)\sqrt[11]{y^2\left(y^2-25\right)+\frac{294912}{2047}} \; ;$$

where, $\frac{309}{2\alpha u+2\beta v}+\frac{107}{2\alpha u-2\beta v}=-104$,

and, $\frac{206}{2\alpha u+2\beta v}-\frac{49}{2\alpha u-2\beta v}=51$;

then,

$$\frac{221u^2-178uv+221v^2}{2uv}=?$$
